

NASAL IRRIGATION

When to do them:

- in acute or chronic rhinosinusitis,
- in allergic rhinitis,
- in bacterial rhinitis,
- in the common (viral) cold,
- in children attending school,
- mother and who get sick frequently,
- in subjects who continue to lighten the throat,
- in patients who snore,
- in atrophic and drying rhinitis,
- in subjects with closed ears,
- in nasal polyposis,
- in rhinitis during pregnancy,
- after nose surgery.

What to expect:

- better breathing,
- a decrease in related symptoms to infectious episodes of the upper airways,
- a reduction in inconvenience due to exposure to allergens,
- a reduced need to use drugs local and systemic used to fight the disorders listed above,
- a quicker post-operative recovery in case of nose surgery.

The advantages of the two-way shower Rinoway®:

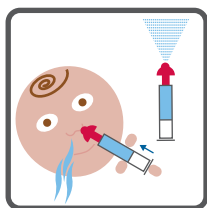

- it can be used many times, compared to disposable bags on the market.
- it can be used to carry out "pressure" washing or "by gravity" washing, for a more delicate wash.
- the nebulizer nozzle allows you to use salts Rinoway® Std and Rinoway® 3% even for the little ones.
- does not require electricity!
- allows irrigation of 250 ml.
- It can be sterilized in the microwave.
- Made in Italy.
